

Powered Respirator

Training, assessment & wearer certification

Full certificate and passport style card on successful completion.

Completed on site at work on agreed dates.

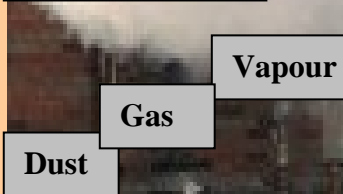

Undertaken by a Chartered Practitioner with IOSH who has also undertaken RPE Fit Test training at the Health & Safety laboratory of the HSE

Portable battery powered fan unit providing forced air into a loose fitting head top or hood.

This equipment does not require a tight fitting fit test.

The hood is also ideal for persons with beards or stubble where a fit test is not possible.

Training & Assessment

There is a pre assessment on a 1:1 to discuss individual circumstances and any specific concerns about existing health conditions in using the equipment.

The essential training includes setting up the equipment, calibration checks, set up checks, correct filter fitting, warning systems, operational use and controls, seal and filter maintenance, planned preventative maintenance etc, maintaining clean air, EX options for explosive or flammable atmospheres and various head top options and guidance on use as well as for emergencies.

The final assessment is a practical exercise on a 1:1 basis to ensure each candidate is competent with the equipment. Certification lasts 5 years provided the equipment is used/maintained at least once per annum.

Quotations by BST are provided for the course to meet your specific requirements and will vary dependant on the number of candidates, distance, and venue etc.

Course content and duration may change as a result of changes needed to comply with HSE guidance, statutory provision or necessary updates, but details were correct at the time of publication..
